

Michael Thompson – FORT ROUGE-EAST FORT GARRY

Hello,

Thank you for bringing up this issue. I am not in office yet, but here are my views on this issue.

Your readers can decide if I am a better candidate than the current councillor.

Clean up past generations messes. Every generation has to do the work and spend funds to clean up messes from past generations so future generations can have hope in their future.

This is a classic and outstanding issue that comes up every election but really given how long we have been avoiding and not taking responsibility for this is criminal. Your leadership for the city, province and federal government should be working to resolve this issue. We don't have time to waste with the environment and our future water needs. This is the equivalent of having a oil spill every year and doing nothing to address the problem or the environment disaster. Let's clean up our own back yard before we have no back yard left to enjoy. If voted in I vote to support the below issues to move forward on this issue. Let's go for now and future generations! Vote for me so I can work for the ward.

Thank you for the work you do to advocate for this issue. Without your group, consecutive governments would avoid accountability.

I hope your aware that the province is spending \$50 to \$75 million on water treatment plants in every community this year. You should make your readership aware of this and how much they are spending in communities without even allocating funds for this issue.

Thank you,

Michael
